BIO

Vaclav Linkov got master degree from algebra and then worked as a mathematics lecturer and programmer in several companies. While engaged with mathematics, he started to study psychology and got bachelor, master, and doctoral degrees at Masaryk University in Brno, where he was engaged in research in personality psychology. He spent five years studying Korean, Chinese, and Asian studies at universities in Seoul, Taipei, and Wuhan. During this time he got interest in cultural and indigenous psychology and wrote several papers about that cultural comparative research is not possible without understanding cultures of interest and not-denying introspective knowledge of own culture. He works as a traffic psychologist in CDV - Transport Research Centre, Czech Republic, where he is currently involved in projects concerning human factor in autonomous vehicle use. Since 2019 he also studies PhD. related to neural networks usage in autonomous vehicles' vision at Brno University of Technology.
